

**REMARKS**

In the above-identified Office Action the Examiner has rejected Claims 1 to 7 and 38 as being anticipated by the patent to Smyth. Further claims 37 and 39 have been rejected as unpatentable over Smyth. Applicant has amended the independent claims 1 and 38 so that each now recites that the collector mirrors automatically adjust in the mount so that the optical properties of the collector mirror remain approximately the same when the temperature changes. Smyth teaches that the angular displacement of the mirror maybe individually controlled about the first and second axis through a control system. This does not teach that the collector mirror is automatically adjusted in the mount in response to a thermal load so that the properties of the mirror remain about the same in the event that the temperature changes. As a result Applicant believes that the claims as amended define an invention which is neither anticipated nor made obvious by the art of record.

Applicant hereby requests reconsideration and reexamination thereof.

With the above amendments and remarks, this application is considered ready for allowance and Applicant earnestly solicits an early notice of same. Should the Examiner be of the opinion that a telephone conference would expedite prosecution of the subject application, he is respectfully requested to call the undersigned at the below-listed number.

Respectfully submitted,

Gerald T. Shekleton
